RE: Recommendation letter for UET

Dear Sirs,

Medinol has implemented through UET a Water purification system for the production of process water to various machines in the factory. The system incorporates UET's unique technology for removal of excess of hard minerals, dissolved metals and bio-life in the water before entering a RO system and DI process. The whole process does not utilize any chemicals or additives.

Medinol, as being a bio-medical company holds high standards for water treatment in terms of water quality and system requirements. The system installed by UET meets those standards to our satisfaction. Furthermore, the lack of chemicals in the treatment process has proven to be highly efficient: technically, economically and also for operating and maintenance aspects.

The routine service provided by UET includes site visits, water analysis reports, on-going service to the units, replacing consumable items and fixing any problems. The UET personnel are always professional and pleasant.

We congratulate UET for a job well done and highly appreciate and strongly recommend using UET's technology and equipment.

Sincerely,

Semion Nasatin
Engineering Manager
